PROFESSIONAL SUMMARY

Cybersecurity graduate with hands-on experience in SOC-style monitoring, network security, vulnerability assessment, and firewall configuration in virtualized environments. Skilled in log analysis, intrusion detection, and network traffic inspection using industry tools including Wazuh, Suricata, Wireshark, and Nessus. Seeking entry-level SOC Analyst, IT Security Analyst, or IT Support role to apply practical security operations and networking skills.

CORE SKILLS

Security Operations: SIEM (Wazuh), log analysis, alert triage, intrusion detection (Suricata), incident detection, vulnerability management

Networking & Security: pfSense firewall configuration, VLAN segmentation, TCP/IP, DNS, DHCP, network isolation, VPN concepts

Systems: Linux (Ubuntu, Kali), Windows 10/11, VirtualBox

Security Tools: Wireshark, Nmap, Netcat, Metasploit, Nessus, Wazuh, Suricata

Scripting: Python, Bash, PowerShell, SQL

SECURITY PROJECTS

SOC Monitoring & Detection Lab (Wazuh / Suricata / Wireshark)

- Deployed Wazuh SIEM in a virtualized environment to collect and analyze logs from Windows and Linux endpoints
 - Monitored system and network activity to detect and investigate suspicious behavior patterns
 - Used Suricata IDS and Wireshark to analyze network traffic and identify scanning activity and anomalies
 - Correlated alerts and logs to simulate SOC investigation workflows and incident triage
-

Network Security & Segmentation Lab (pfSense / Kali Linux / Metasploitable 2)

- Configured pfSense firewall rules and VLAN segmentation to isolate systems in a virtual network environment
 - Performed controlled vulnerability scanning using Nmap against intentionally vulnerable systems
 - Executed controlled connection testing using Netcat to simulate unauthorized access attempts
 - Validated firewall rules by testing blocked and permitted traffic between segmented network zones
-

Vulnerability Assessment Lab (Nessus / CVSS)

- Conducted vulnerability scans using Nessus in credentialed and non-credentialed environments
 - Prioritized vulnerabilities using CVSS severity scoring
 - Verified remediation effectiveness through follow-up scanning and validation
-

EXPERIENCE

Chief Instructor | Han-Mi Taekwon-Do | 2015 – 2023

- Led structured training programs requiring discipline, consistency, and operational execution
 - Enforced safety standards and procedural compliance in structured environments
 - Communicated complex instructions clearly across diverse skill levels
-

EDUCATION

M.S. Cyber Engineering – University of the Cumberland (Expected 2026)

B.S. Computer Science – Colorado State University Global (2024)

CompTIA Security+ – In Progress
